A Developer's Smorgasbord

First bite of the Cherry(py)

I didn't always work at Splunk. In fact, many moons ago I used to be a Splunk customer. At the time we were simply looking for a means to better consolidate our enterprise's numerous sources of log data into a

REST API

splunk®>

Splunk REST API

- An API method for all features of the platform
- Send data in
- Search and Export data out
- JSON , CSV, XML

Integrating Splunk and your Spring App

How can Splunk help out the Spring Developer ?

- During Dev/Test
 - Use Splunk to deliver deeper insights , hook in more thorough test case assertions
 - Aggregate data from your apps in development
- Integrate the Data you have collected with Splunk
 - Use Spring as the EAI backbone to build integrated data solutions , correlate data form numerous sources
- Build standalone Big Data apps
 - Let Splunk do the hard yards on the data and searching side

What are some of the hooks?

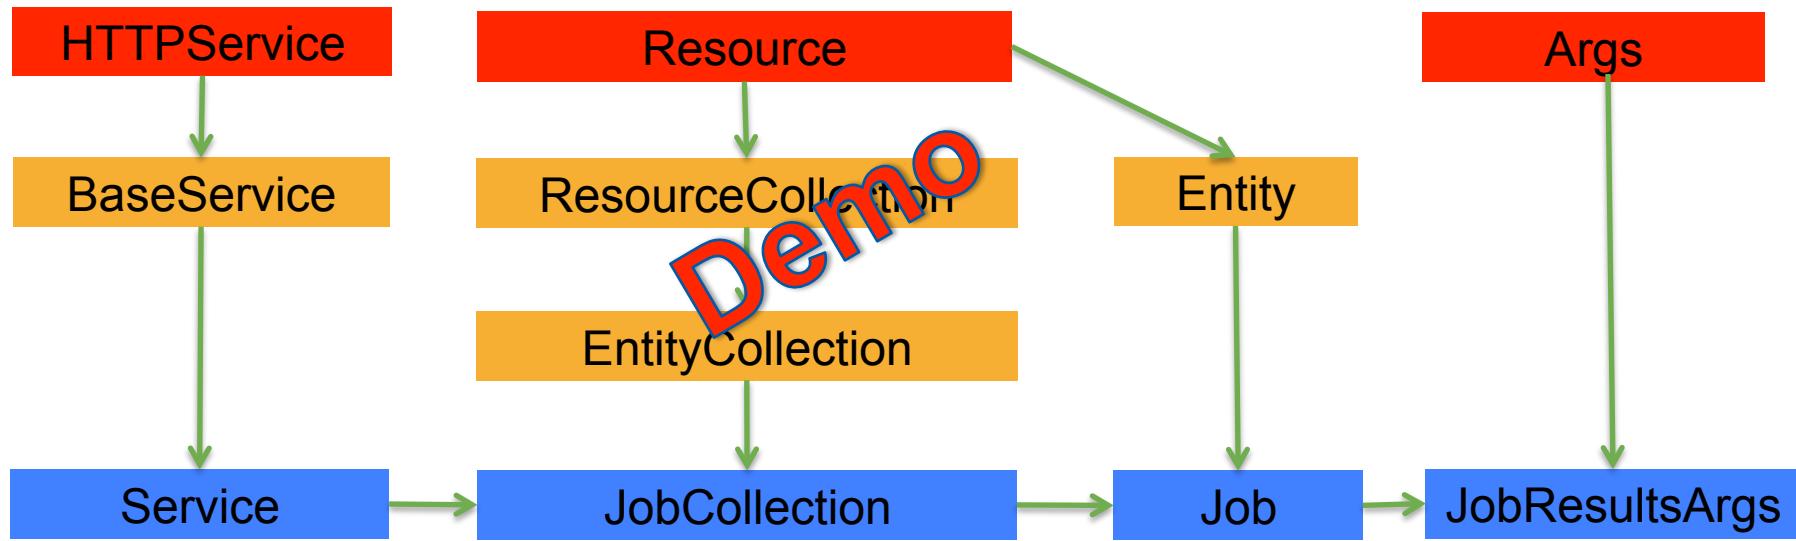

- REST API
- Splunk SDK for Java
- Spring Integration Adaptors
- Logging
- JMS Messaging
- JMX MBeans
- REST
- BCI(byte code injection) tracing

Splunk SDK for Java

Splunk SDK for Java

- Open sourced under the Apache v2.0 license
- git clone <https://github.com/splunk/splunk-sdk-java.git>
- JRE 6+
- Maven/Gradle Repository
- Code Examples :
 - Connect
 - Hit your first endpoint
 - Send data in
 - Search for data , Simple and Realtime
 - Scala and Groovy can play too

SDK Class Design

Spring Integration Adaptors

When Spring and Splunk collide

- Developers like tools & frameworks that increase productivity
- An SDK makes it easier to use a REST API
- A declarative Enterprise Integration framework makes it easier to build solutions that need to integrate, transform, filter and route data from heterogeneous channels and data sources
- We now have the Spring Integration Splunk Adaptors to make it easier for Java Developers to integrate Splunk into their solutions utilizing a semantic they are most familiar with in the Spring framework.

Spring Integration And Splunk

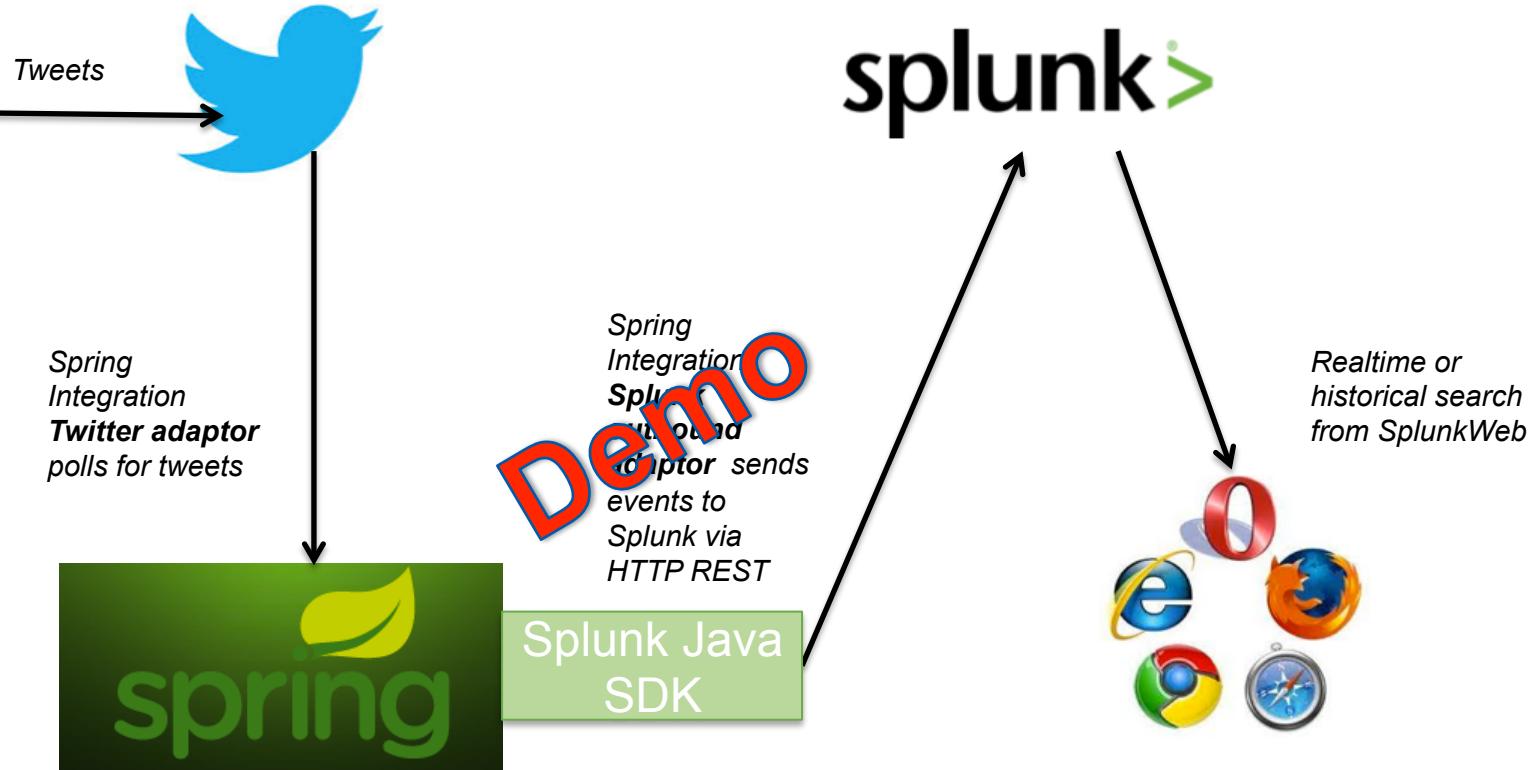

Inbound Adapter

- Used to execute Splunk searches and produce messages containing results
- Search modes: *BLOCKING, NORMAL, REALTIME, EXPORT, SAVEDSEARCH*
- Date/Time Ranges

Outbound Adapter

- Write system or application events to Splunk
- Write to a named index, submit a REST request, write to a data input bound to a server TCP port

Message payload for Splunk I/O adapters is `SplunkEvent`

Raw events from Twitter are transformed into best practice logging format

Logging

SplunkJavaLogging

- A logging framework to allow developers to as seamlessly as possible integrate Splunk best practice logging semantics into their code
- Transport log events to Splunk directly from your code
- Custom handler/appender implementations(REST and Raw TCP) for common Java logging frameworks .
 - LogBack
 - Log4j (Log4j2 coming also)
 - java.util.logging
- Utility classes for formatting log events
- Configurable in memory buffer to handle network outages

Developers just log as they are used to

```
/**  
 * Just log as usual, and wire up a Splunk REST/TCP appender to forward the  
 * event to Splunk  
 */  
private static void simpleLogExample() {  
  
    // get your logger  
    Logger logger = LoggerFactory.getLogger("splunk.logger");  
  
    // log a regular string  
    logger.info("REST for the wicked");  
  
}
```

Search

```
index=main sourcetype=logback name="Failed Login" | stats count as "Failed Logins" by app,user
```

1 result in the last 15 minutes (from 3:46:00 PM to 4:01:59 PM on Tuesday, August 7, 2012)

Export Options

Overlay: None

app	user	Failed Logins
myapp	jane	3

```
/**  
 * Format the log message to adhere to Splunk best practice logging  
 * semantics  
 */  
private static void splunkLogEventExample() {  
  
    // get your logger  
    Logger logger = LoggerFactory.getLogger("splunk.logger");  
  
    // create a SplunkLogEvent with a date and values quoted  
    SplunkLogEvent event = new SplunkLogEvent("Failed Login", "someID");  
  
    //add Splunk CIM fields  
    event.setAuthApp("myapp");  
    event.setAuthUser("jane");  
  
    // add a custom field  
    event.addPair("somefieldname", "foobar");  
  
    // log a splunk log event generated string  
    logger.info(event.toString());  
}
```

Better

A-HA

2012-08-07 15:54:06:644+1200 name="Failed Login" event_id="someID" app="myapp" user="jane" somefieldname="foobar"

Semantic Logging

Log anything that can add value when aggregated, charted or further analyzed

Example Bogus Pseudo-Code:

```
void submitPurchase(purchaseId)
{
    log.info("action=submitPurchaseStart, purchaseId=%d", purchaseId)
    //these calls throw an exception on error
    submitToCreditCard(...)
    generateInvoice(...)
    generateFullfillmentOrder(...)
    log.info("action=submitPurchaseCompleted, purchaseId=%d", purchaseId)
}
```

- Create Human Readable Events
- Clearly Timestamp Events
- Use Key-Value Pairs (JSON Logging)
- Separate Multi-Value Events
- Log Unique Identifiers

Log4J config

```
log4j.appender.splunkrest=com.splunk.logging.log4j.appenders.SplunkRestAppender
log4j.appender.splunkrest.user=admin
log4j.appender.splunkrest.pass=somypass
log4j.appender.splunkrest.host=localhost
log4j.appender.splunkrest.port=8089
log4j.appender.splunkrest.delivery=stream
log4j.appender.splunkrest.metaSource=rest
log4j.appender.splunkrest.metaSourcetype=testing
log4j.appender.splunkrest.metaIndex=main
log4j.appender.splunkrest.maxQueueSize=5MB
log4j.appender.splunkrest.dropEventsOnQueueFull=false
```

Java stacktraces are a nuisance

```
java.lang.Throwable: Something bad happened
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwThrowable(SplunkJavaLoggingExamples.java:126)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwableExample(SplunkJavaLoggingExamples.java:86)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.main(SplunkJavaLoggingExamples.java:23)
java.lang.Error: Error, Error, Error
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwError(SplunkJavaLoggingExamples.java:121)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwableExample(SplunkJavaLoggingExamples.java:96)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.main(SplunkJavaLoggingExamples.java:23)
java.lang.Exception: Here is a caught Exception
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwException(SplunkJavaLoggingExamples.java:117)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.throwableExample(SplunkJavaLoggingExamples.java:105)
    at com.splunk.dev.spike.SplunkJavaLoggingExamples.main(SplunkJavaLoggingExamples.java:23)
```

SplunkJavaLogging is your friend

```
/**  
 * Log an Error/Exception/Throwable and handle the stacktrace elements in Splunk as a multi value field  
 */  
private static void throwableExample() {  
  
    // get your logger  
    Logger logger = LoggerFactory.getLogger("splunk.logger");  
  
    try {  
  
        throw new Exception("Danger Danger");  
  
    } catch (Throwable throwable) {  
        SplunkLogEvent event = new SplunkLogEvent();  
        event.addThrowable(throwable);  
        logger.error(event.toString());  
    }  
  
}
```

JMS Messaging

JMS Messaging Splunk Input

- JMS is an interface that abstracts your underlying MOM provider implementation
- Send messages to *parallel* queues or topics in Spring that Splunk can tap into
- Index messages from :
 - MQ Series / Websphere MQ
 - Tibco EMS
 - ActiveMQ
 - HornetQ
 - RabbitMQ
 - SonicMQ
 - JBoss Messaging
 - Weblogic JMS
 - Native JMS
 - StormMQ
- Note : Non-JMS inputs also available (Stomp , ZeroMQ)

JMS input fully integrated into Splunk

The screenshot shows the Splunk Manager interface for managing data inputs. The top navigation bar includes links for Back to Home, Administrator, App, Manager, Alerts, Jobs, Logout, Help, and About. The main title is "splunk> Manager » Data inputs". A green "Add data" button is visible on the left. The table lists the types of data inputs and their counts:

Type	Inputs	Actions
Files & directories <i>Upload a file, index a local file, or monitor an entire directory.</i>	4	Add new
TCP <i>Listen on a TCP port for incoming data, e.g. syslog.</i>	0	Add new
UDP <i>Listen on a UDP port for incoming data, e.g. syslog.</i>	0	Add new
Scripts <i>Run custom scripts to collect or generate more data.</i>	0	Add new
JMS Messaging <i>Poll messages from queues and topics</i>	1	Add new

Add a new queue/topic input

The screenshot shows the Splunk Manager interface for Data inputs > JMS Messaging. The top navigation bar includes links for Back to Home, Administrator, App, Manager, Alerts, Jobs, and Logout. Below the navigation is a breadcrumb trail: splunk > Manager > Data inputs > JMS Messaging. A search bar and a green search icon are on the right. The main content area has a title "JMS Messaging" with a "New" button, and a message "Showing 1-1 of 1 item". A table lists one item: "queue/dynamicQueues/splunkqueue" under "JMS Topic or Queue to index messages from", "jms" under "Source type", "launcher" under "App", "Enabled" under "Status", and "Clone | Delete" under "Actions". A "Results per page" dropdown is set to 25.

JMS Topic or Queue to index messages from	Source type	App	Status	Actions
queue/dynamicQueues/splunkqueue	jms	launcher	Enabled Disable	Clone Delete

Configure the properties to connect

[« Back to Home](#)

splunk> Manager » Data inputs » JMS Messaging » Add new

Administrator | App | Manager | Alerts | Jobs | Logout

Help | About

Add new

JMS Topic or Queue to index messages from *

Enter the name precisely in this format : topic/mytopic or queue/myqueue.

Initialisation Mode

jndi

Initialise connection objects via JNDI or Local instantiation.

JMS Connection Factory JNDI Name *

Ensure any required jars are in the \$SPLUNK_HOME/etc/apps/jms_ta/bin/lib directory

JNDI Initial Context Factory Name *

Ensure any required jars are in the \$SPLUNK_HOME/etc/apps/jms_ta/bin/lib directory

JNDI Provider URL *

URL to connect to the JNDI Server

User defined JNDI properties

User specific JNDI properties string in format 'key1=value1,key2=value2,key3=value3'

JNDI Username

Username for authenticated JNDI connections

JNDI Password

The screenshot shows the Splunk Manager interface with the 'Data inputs' section selected. Under 'JMS Messaging', a new configuration is being added. The form requires the 'JMS Topic or Queue to index messages from' (e.g., 'topic/mytopic' or 'queue/myqueue'), 'Initialisation Mode' (set to 'jndi'), 'JMS Connection Factory JNDI Name', 'JNDI Initial Context Factory Name', 'JNDI Provider URL', 'User defined JNDI properties' (containing 'key1=value1,key2=value2,key3=value3'), 'JNDI Username', and 'JNDI Password'. The 'Initialisation Mode' dropdown has 'jndi' selected. The 'User defined JNDI properties' field contains the string 'key1=value1,key2=value2,key3=value3'.

JMX

Expose Mbeans in your Spring App

- 3 tiers can be exposed
 - JVM (java.lang domain)
 - Framework / Container (Spring , Tomcat etc...)
 - Application (whatever you have coded)
- Attributes , Operations and Notifications
- Use Splunk for JMX to monitor the internals of your running Spring apps

Splunk for JMX

- Multiple connectivity options
 - rmi/iiop ,direct process attachment, mx4j http connectors
- Works with all JVM variants
- Scales out to monitor large scale JVM infrastructures

Demo

REST

REST is easy with Spring

- Create an endpoint with Spring Integration
- Splunk can poll the REST API endpoint
- Multiple authentication mechanisms
- Custom response handling / pre-processing
- Send responses in XML , JSON
- Splunk can natively index the responses and then simply search over the auto extracted fields

REST : The Data Potential

There is a world of data out there available via REST that can be brought into Splunk, correlated and enriched against your existing data, or used for entirely new uses cases that you might conceive of once you see what is available and where your data might take you.

- Twitter
 - Foursquare
 - LinkedIn
 - Facebook
 - Fitbit
 - Amazon
 - Yahoo
 - Reddit
 - YouTube
 - Flickr
 - Wikipedia
 - GNIP
 - Box
- 
- Okta
 - Datasift
 - Google APIs
 - Weather Services
 - Seismic monitoring
 - Publicly available socio-economic data
 - Traffic data
 - Stock monitoring
 - Security service providers
 - Proprietary systems and platforms
 - Other “data related” software products
 - **The REST “dataverse” is vast , but I think you get the point.**

BCI(Byte Code Injection) Tracing

Splunk Java Agent

An instrumentation agent for tracing code level metrics via bytecode injection, JMX attributes/operations/notification and decoded HPROF records and streaming these events directly into Splunk

<https://github.com/damiendallimore/SplunkJavaAgent>

- class loading
- method execution
- method timings (cumulative, min, avg, max, std deviation)
- method call tracing(count of calls, group by app/app node(for clustered systems)/thread/class/package)
- method parameter and return value capture (in progress)
- application/thread stalls , thread dumps and stacktraces
- errors/exceptions/throwables
- JVM heap analysis, object/array allocation count/size,class dumps, leak detection, stack traces, frames
- JMX attributes/operations/notifications from the JVM or Application layer MBean Domains

Design goals

- Just pull out the raw metrics , then let Splunk perform the crunching
- Format events in best practice semantic , well defined key value pairs , tagged events help correlation across distributed environment
- Low impact to the instrumented application
- No code changes required
- Flexible configuration
- Extensible
- Generic open source agent , I may have used some Splunk terms in the naming conventions, but it is still completely generic , **anyone want to collaborate !**
- Not a full blown APM solution , just pulling raw data.
- Incorporate into your Spring apps during Dev/Test to get deeper insights

Setup should be as simple as possible

This is all you pass to the JVM at startup :

-javaagent:splunkagent.jar

Everything required by the agent is built into the one single jar file

We also have a new Eclipse plugin that incorporates this functionality if you don't want to setup the JVM command line argument manually.

Configuration should allow for flexibility

```
#-----
# Common Agent options
#-----

agent.app.name=MyTestApp
agent.app.instance=MyJVM
agent.userEventTags=key1=value1,key2=value2

#-----
# Splunk Transport options
#-----
#splunk.transport.internalQueueSize=10000
splunk.transport.impl=com.splunk.javaagent.transport.SplunkTCPTransport
#splunk.transport.impl=com.splunk.javaagent.transport.SplunkStdOutTransport
splunk.transport.tcp.host=ubuntu-splunk
splunk.transport.tcp.port=5150
splunk.transport.tcp.maxQueueSize=5MB
splunk.transport.tcp.dropEventsOnQueueFull=false

#-----
# Class/Method/Error Tracing options
#-----
#trace.whitelist=com/some/package/you/want/to/monitor
trace.blacklist=com/sun,sun/,java/,javax/,com/splunk/javaagent/
trace.methodEntered=true
trace.methodExited=true
trace.classLoaded=true
trace.errors=true
trace.returnValue=true
trace.parameterValues=true

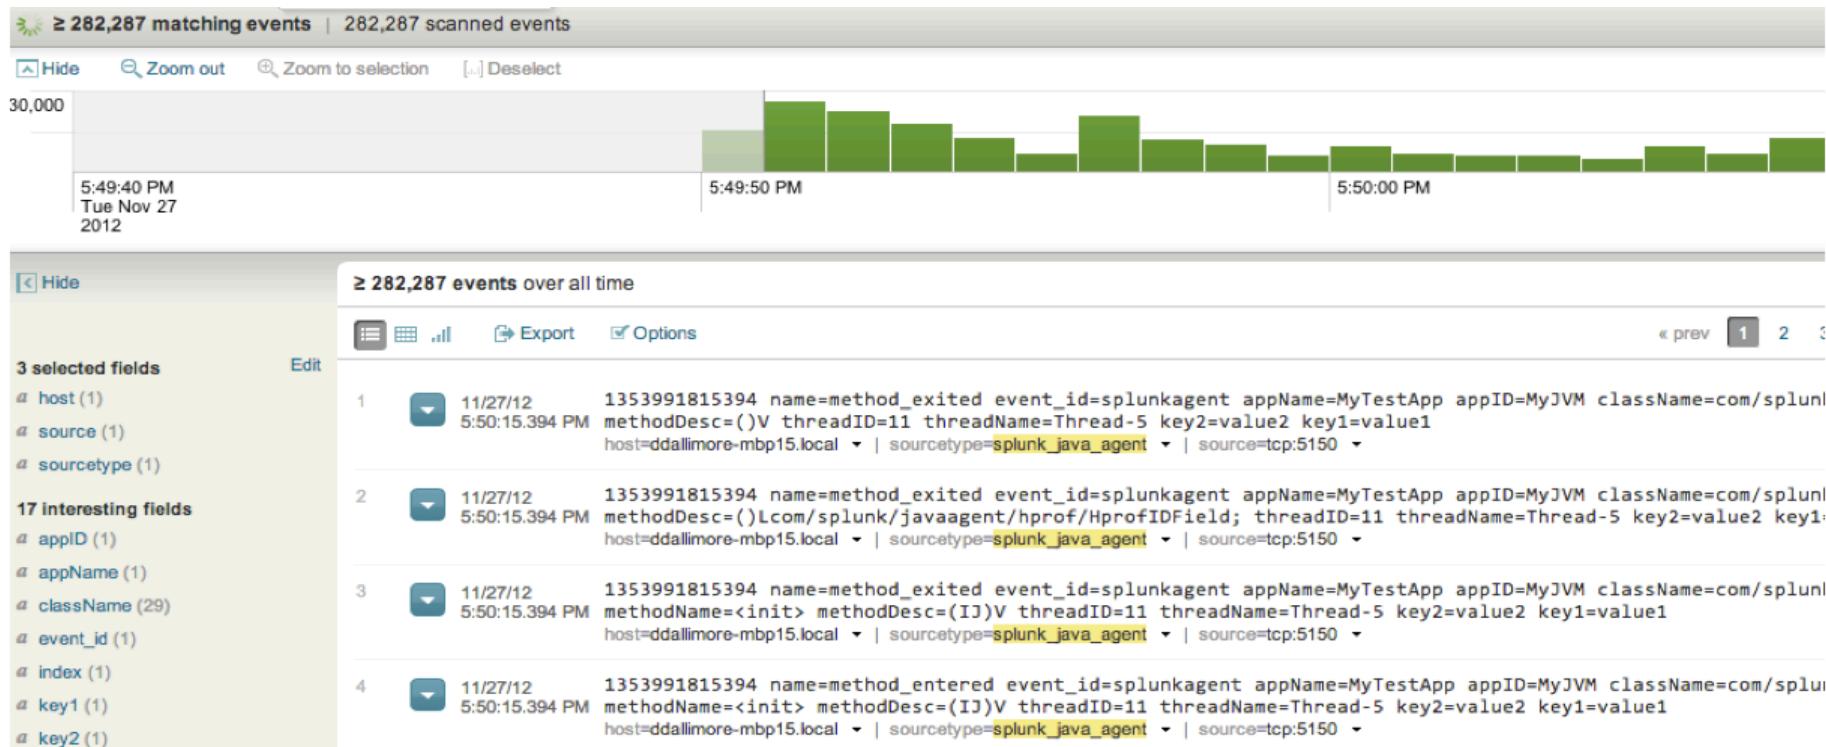

#-----
# HPROF Dump Collection options
#-----

#periodically dump hprof file(using JMX operation call)
trace.hprof=false
trace.hprof.tempfile=mydump.hprof
#trace.hprof.tempfile=/etc/tmp/dump.hprof
#in seconds
trace.hprof.frequency=600
#trace.hprof.recordtypes=2,3,4

#-----
# JMX attribute/operation/notification collection options
#-----

#Embedded JMX polling , all other JMX config is in the JMX XML configuration file.
trace.jmx=false
#name of XML files(minus the ".xml" suffix) that should reside in the root of splunkagent.jar
trace.jmx.configfiles=jmx
#trace.jmx.configfiles=goo,foo
#in seconds
trace.jmx.default.frequency=60
#trace.jmx.goo.frequency=30
```

Raw events streamed into Splunk

Use Splunk to derive insights

splunk > Search

A couple of other integrations you may like

Let's integrate some mobile data

Android SDK project

- Cousin to the Splunk SDK for Java, has all the same functionality and code examples are the same
- Utility classes to make common tasks easier
 - logging to Splunk
 - searching Splunk
 - **pulling system/device/sensor metrics from Android and logging to Splunk**
- Send Android data to Splunk and then use the Spring Integration Splunk Inbound adaptor to integrate this into your Spring applications.
- Community preview currently published to Github

Demo

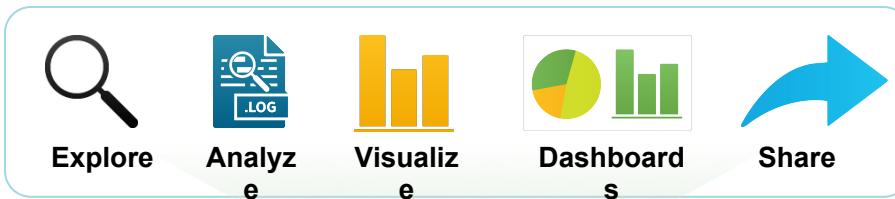

Making Hadoop analytics easier

HUNK (Splunk Analytics for Hadoop)

- A new product offering from Splunk , currently in Beta preview
- Allows you to use the power and simplicity of Splunk to search over data locked away in HDFS
- Sits on top of HDFS as if it was a native Splunk Index
- Virtual Indexes
- So you can use the Spring Integration Splunk Inbound Adaptor to search over data in HDFS, or correlate your HDFS data with other data you have indexed and integrate it into your Spring Applications.

Splunk sits on top of HDFS

1 Point
Splunk at
Hadoop
Cluster

2 Immediately
start exploring,
analyzing and
visualizing raw
data in Hadoop
